Letter of support

The IT Teachers' Association for Upper Secondary Education (IT-lærerforeningen) is pleased to support the proposed **CRAFT** project at the Department of Computer Science, University of Copenhagen, led by Professor Pernille Bjørn and PhD Candidate Sara Boline Ingvarsen.

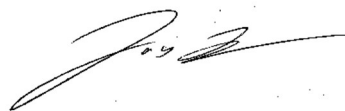

We consider the project's focus on artefact-based and inclusive approaches to computing education to be both timely and highly relevant to the continued development of informatics and technology education in upper secondary schools. The project's ambition to explore and develop new approaches to teaching and learning aligns closely with current needs and priorities within the field.

Should the project receive funding, IT-lærerforeningen will be pleased to support the dissemination of project findings and facilitate knowledge exchange through relevant professional networks and activities. This may include opportunities for presentations, dialogue with teachers and practitioners, and sharing results through the association's communication channels and annual conference.

We look forward to following the project's progress and to contributing, where appropriate, to ensuring that its insights and outcomes reach educators and other relevant stakeholders.

Yours sincerely,

Jacob Stenlørkke Bendtsen
